

Sealed Air®

BRAND PROTECTIVE PACKAGING

Instasheeteer™ Select

Material Insertion System

PRODUCT OVERVIEW

Instasheeteer™ Select streamlines packaging operations by eliminating the need for packers to manually insert cushioning material into every box.

The innovative system automatically cuts and inserts sheets of BUBBLE WRAP® brand inflatable bubble to the length of each box to eliminate packaging waste and provide superior damage protection.

FEATURES

- **Optimise labour resources:**
Automated insertion of cushioning materials allows for packers to be reallocated to other tasks within the fulfilment operation.
- **Customise to reduce packaging waste:**
Non-perforated bubble is inflated on-demand and cut to the exact, programmed length, based on box size.
- **Protect against damage:**
Choose between inserting inflatable bubble cushioning in the bottom of the box or on top of product – or both.
- **Minimise the fulfilment footprint:**
On-demand bubble reduces the need to store cushioning materials, allowing for operational expansion and increased revenue.

BENEFITS

- Increases throughput as the system inserts inflatable bubble up to **22 boxes per minute**.
- Reduces the operational packaging cost by **25-30%** through automation.
- **30% more damage protection** than competitive bubble wrap of the same size.
